

Why Us for Hearing Aids?

- Hearing aid technology will only take you so far—the hearing aid, *any hearing aid*, has to be adjusted optimally for your hearing and ear.
- Hearing aid fitting is a science, not an art, and a successful hearing aid fitting has at its foundation an accurate diagnosis and understanding of your hearing impairment.
- The state of the science in hearing aid fittings is with probe-microphone, real-ear measures. This is where a microphone is placed in your ear canal so that it measures the sound of the hearing aid in your ear.
- Only Audiologists have college training and experience in hearing aids (Audiology is a 4-year post-graduate degree).
- We are not limited to only one manufacturer or one style of hearing aid, and we can repair and service almost any hearing aid.
- We test you with the hearing aid in place to make sure that you are hearing to prescription (not just what the fitting-computer thinks you are hearing).
- We wrote the book on Hearing Aid Help.
